Sunscreen GUIDE

Reckless companies are using nanoparticles in sunscreens to make sun-blocking ingredients like titanium dioxide and zinc oxide rub on clear instead of white. These nanoparticles – which can potentially wreak havoc on your body when absorbed through the skin – are being added without labeling and reliable safety information. Keep this pocket guide handy when shopping to determine whether your sunscreen has the green light to nano-free protection or whether it raises a red flag. To learn more about choosing safe sunscreens, visit www.foe.org/nano.

(GREEN) PRODUCTS ARE NANO FREE
